

New Trelleborg TM1 Eco Power

As agriculture evolves, the demand for **greater efficiency** and **sustainability** is growing. Electric tractors play a prominent role in this changing landscape.

The new **Trelleborg TM1 Eco Power** tire is designed for the new generation of **electric tractors**, offering exceptional performance and prioritizes eco-sustainability.

The TM1 Eco Power tire, with its unparalleled and **ultra-low rolling resistance**, **maximizes battery usage** and ensures low energy consumption.

It delivers **optimal traction, stability, and comfort** on various terrains, setting a new industry standard that combines superior functionality with a significant focus on **eco-sustainability** for a more efficient and responsible future.

New Trelleborg TM1 Eco Power

- Featuring **unmatched ultra-low rolling resistance** compared to any of our competitors, the TM1 Eco Power enables extended battery usage and low energy consumption.
- **Superior traction and comfort** on hard surfaces due to an innovative tread lug configuration and tire structure.
- **The most sustainable agriculture tire** with 65% of components sourced from sustainable sources.
- **Exceptional self-cleaning** properties achieved by the new interlug design, which extends up to the lug top border and progressively increases lug distance.
