

Trelleborg

TM1000 ProgressiveTraction® Enrich your farming

In the decades to come, agriculture will be asked to feed the world's growing population while meeting a greater demand for renewable sources of energy. Within this context, Trelleborg continues to expand the product offering with new technologies, products and services aimed at increasing productivity while protecting our planet.

The TM1000 ProgressiveTraction® tire, engineered according to VF standards and equipped with the multi-award-winning ProgressiveTraction® technology, is an innovative tire solution which provides superior flotation, less stress on the soil and unbeatable traction. On the road, it guarantees low fuel consumption and emissions, premium handling and comfort while extending tire life.

The key features of ProgressiveTraction®

Dual anchor, better grip

The “double edge” increases the grip on the soil, improving traction while reducing slippage.

Reduced vibration, less fuel consumption

The wider base of the ProgressiveTraction® lug ensures higher resistance to lug vibrations reducing consumption and extending tire life.

Enhanced self cleaning, higher traction

The extra lug behaves as an additional terraces on the tread profile enhancing its great self cleaning capability and increasing efficiency of the lug.

Advanced technology for advanced farming

The new lug has been designed to increase the flotation performance while preserving the excellent traction capacity of TM1000 range.

The tread wings enlarge the tread width resulting in superior flotation and reduced soil compaction, boosting cost efficiency and productivity.

The new bead layout assures easier mountability without compromising the premium anti-slipping capacity of Trelleborg tires.

The new strong carcass absorbs the stresses transmitted during the different working operations without compromising the flexibility, essential to guarantee driving comfort at very low pressure.

Heavy work needs efficiency

The TM1000 ProgressiveTraction® benefits from VF construction designed to increase efficiency both in the field and on the road. In the field it ensures less soil compaction through its wider footprint area, while on the road, it reduces the number of trips due to its very high load capacity.

The image shows two TM1000 ProgressiveTraction tires side-by-side. The left tire is on a dirt surface, labeled 'FIELD APPLICATION'. Above it is a line drawing of a tractor seat and the text 'Up to -30% lower pressure @ same load'. The right tire is on an asphalt surface, labeled 'ROAD APPLICATION'. Above it is a line drawing of a weight scale and the text 'Up to +40% higher load @ same pressure'. Both tires have 'TM1000' and 'TRILLERBORG' printed on them.

Save time to enrich productivity

With its wide footprint and superior self-cleaning feature, Trelleborg tires assure outstanding traction.

Traction performance - Index Higher is better

Slippage 8% - 15% - pre-worked heavy soil

High Torque

Reduced working time results in reduced operating cost and low fuel consumption. The TM1000 ProgressiveTraction® only uses 42,5 lt/ha compared to the 42,9 lt/ha of Premium Competitor A.

Time to plough 500 ha

High torque conditions – slippage 12%

Farming that saves the environment

Agricultural machinery plays an important role on the environmental sustainability assessments of the agricultural sector and a prominent part of its impact is due to fuel consumption and engine exhaust gases emissions. TM1000 ProgressiveTraction® on the field enhances fuel savings and reduced emissions combined with increased mileage.

Lightness is our signature

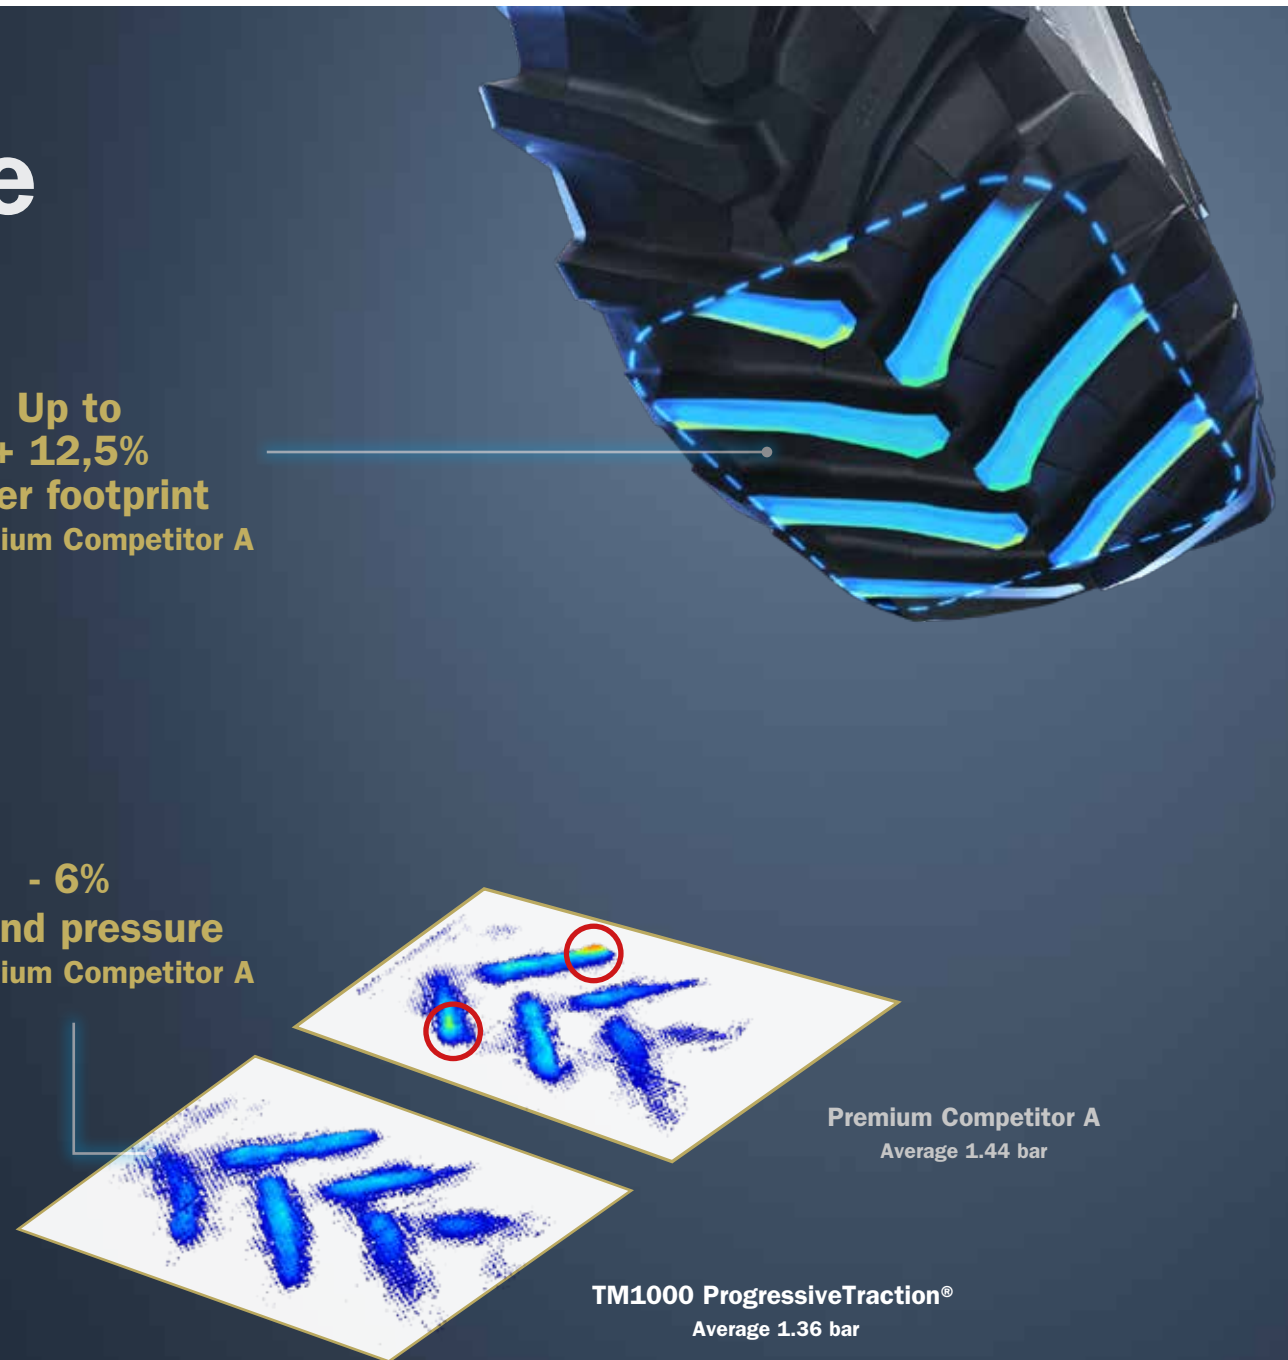

TM1000 ProgressiveTraction® wide lug base surface reduces tire sinkage into the ground. The empowered sidewall flexibility leads to a wide footprint area resulting in low soil compaction.

**Up to
+ 12,5%
wider footprint
vs Premium Competitor A**

The contact pressure of TM1000 ProgressiveTraction® is lower on average than competitors when running ground operations. In addition, the Premium Competitor shows higher pressure peaks on the shoulder area which can leave lasting damage to soil porosity.

In addition, it outperforms Premium Competition which shows higher pressure peaks on the shoulder area which can leave lasting damage to soil porosity.

Working the land never been so comfortable

TM1000 ProgressiveTraction® provides premium handling and safety performance. The low level of vibrations increases comfort, essential for your long and demanding farming operations.

Noise causes discomforts reducing both physical and mental performance. The best way for protecting from the harmful effects of the noise is to minimize it. Test results prove that TM1000 ProgressiveTraction® reduced noise levels compared to Premium Competitor A.

TM1000 ProgressiveTraction® It's time for smart farming

Future farming will demand agricultural equipment to be smarter, more autonomous and always connected. Effectively, the TM1000 ProgressiveTraction® is designed to fit the latest smart and precision farming technology effectively, including new generations of CTIS (Central Tire Inflation Pressure) systems and pressure control tools.
